

UI VS UX

Bridging the gap between design and code

What is UI ?

- **Definition :**

User Interface (UI) is the visual layout and interactive Element of a digital product.

- **Key elements :**

Colours, Typography, Buttons, Screen layout, and Icons.

- **Main Goals :**

To create a clear, visually appealing, and easy- to-navigate interface.

What is UX ?

- **Definition :**

User Experience (UX) is how a person feels when interacting a digital product.

- **Key elements :**

User Research, Wireframes, Usability Testing, Information, architecture, and User journey .

- **Main goals :**

To create a smooth, useful, and satisfying overall experience for The user.

UI vs UX Differences

UI (User Interface)

- **Focus** : How the product looks (Visual Design).
- **Elements** : Colours, Fonts, Buttons, Images, and Layout.
- **Goal** : To make the product visually appealing and beautiful.

UX (User Experience)

- **Focus** : How the product feels & works (Functionality).
- **Elements** : Research, Wireframes, Navigation, and Testing.
- **Goal** : To make the user journey smooth, easy, and useful.
